

# Gourmet

Global Under-Resourced  
Media Translation

## Project

The aim of GoURMET is to enable the use of machine translation for less common languages, in particular for news coverage.

GoURMET (2019-2021) has received funding from the EU H2020 Research and Innovation Action (grant agreement number 825299)

## Technologies

GoURMET provides open-source models for neural machine translation for low-resourced languages.

Through the project we aim to contribute to:

Advancing low-resource deep learning for natural language applications;

High-quality machine translation for low-resourced and diverse language pairs and domains;

Gathering existing corpora and language resources, and machine-learned augmentation of corpora;

Learning to model words and to induce their linguistic structure to increase the effectiveness of neural machine translation.

## Use Cases

Three use cases are field tested at the partners *BBC* and *Deutsche Welle*:

- **Media monitoring:** monitoring news content in strategically important but less frequent languages
- **Global Content Creation:** managing content creation in several languages efficiently with subsequent correction by editorial staff
- **International business news analysis:** translate and analyse news in the highly specialised financial domain
